                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           밁
                                                   e.g. central nervous system disorders (e.g. Alzheimer's disease), dementia, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, progressive supranuclear palsy, epilepsy, Creutzfeldt-Jacob disease), psychiatric disorders (e.g. depression, schizophrenic disorders, Korsakoff's psychosis, mania, anxiety disorders or phobic disorders), learning or memory disorders (e.g. amnesia or age-related memory loss), neurological disorders (e.g. migraine), obesity, and cardiac disorders. The nucleic acids, proteins, protein homologues and antibodies against them may be further used in screening assays, predictive medicine. The nucleic acids can be inserted into vectors and used as gene therapy vectors, to express TWIK protein, to detect TWIK mRNA, medulate TWIK activity, and screen for drugs or compounds that modulate TWIK activity. Host cells may be used to produce non-human
                                                                                                                                                                                                                                                                                                                    This sequence represents the human TWIK-3 protein of the invention. The TWIK-2 (Tandem of P domains in a Weak Inward rectifying potassium (K+) channel-2), TWIK-3 and TWIK-4 nucleic acids and proteins are useful as targets for developing modulating agents to regulate a variety of cellular processes. They may be useful for developing novel diagnostic and therapeutic agents for potassium channel associated disorders,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New tandem of P domains in a weak inward rectifying potassium channel proteins and genes for e.g. developing therapeutic agents for potassium channel associated disorders, e.g. central nervous system, psychiatric
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; TWIK-3; TWIK-4; TWIK-2; central nervous system disorder; dementia; Trandem of p domains in a Weak Inward rectifying K+ channel; epilepsy; Alzheimer's disease; Parkinson's disease; multiple sclerosis; depression; amyotrophic lateral sclerosis; progressive supranuclear palsy; mania; creutzfeldt-Jacob disease; psychiatric disorder; schizophrenic disorder; Korsakoff's psychosis; anxiety disorder; phobic disorder; amnesia; learning disorder; memory disorder; age-related memory loss; obesity;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Claim 8; Fig 3; 148pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (K+) (TWIK) polypeptide. The specification describes TWIK2, TWIK3, TWIK TWIK5, TWIK6, TWIK7, and TWIK1. The TWIK channel nucleic acids and proteins are used in screening assays to identify candidate compounds which are potential pesticides or therapeutics. The TWIK channel nuclei acids can be used for generating mutant phenotypes in animal models or in living cells that can be used to study the ion channels, their regulation, and their use as pesticide or drug targets, and as hybridisation probes and replication/amplification primers. TWIK channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to generate monoclonal or channel proteins are useful as immunogens to describe the proteins are usefu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polyclonal antibodies, and in assays to identify molecules that would specifically bind to them. Genetically engineered metazoan invertebrate animals may be used in studying TWIK channel activity, and for screening and identifying new drug targets, therapeutic agents, diagnostics and prognosis useful in treating disorders associated with ion channels.

The cDNA and the vectors can also be used to create transgenic animals (especially knock-out animals) for use as models of TWIK-1 related diseases. Analysis of the sequence of the TWIK-1 gene may be used for pre-natal diagnosis of disease. Antibodies can be used to detect TWIK-1 channels and for inhibiting or activating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents a protein confrising a potassium chann with the properties of a TWIK (Tandem of p.d. mains in a Weak Inward rectlifying K+)-1 channel. This is the first represent of a new family of channels consisting of 4 transmembrane segments and two p domains, and being only weakly rectlifying. The cDNA, vectors, the cells expressing TWIK-1 type channels and the protein are used to compensate for deficiency of potassium channels in various tissues. Compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid encoding new potassium channel disignated TWIK-1 - useful for treating channel deficiency diseates, screening for active agents and for diagnosis

                                                                                                                                                                                                                                                                                                       score greater than or equal to the score of the result bein and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the tetal of the result being printed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence is the mouse h-TREK1 polypeptide, encoded by the h-TREK1 polypucleotide AAZ00040. h-TREK1 is a two pore potassium channel. The polynucleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases including cancer, pulmonary, cardiovascular, and schizophrenia, neurodegenerative diseases including Alzheimer's, stroke, and head trauma and neurological disorders including migraine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAY34133 standard; Protein;

This sequence represents the human K+Hnov59 po ssium channel.

CK H+Hnov proteins have a high degree of homology to known potassium channels and may be alpha subunits, which form the functional channel, contained and may be alpha subunits, which form the functional channel, contained and may be alpha subunits, which form the functional channel, contained and may be alpha subunits, which form the functional channel, contained the form the form the functional channels and may be alpha subunits, which form the functional channels are contained by extension of expressed sequences tags (ESTs) which were contained but not identical to known human potassium channels. Potential contential polymorphisms detected as sequence variants between multiple contained to known human potassium channels are collitypes and biochemical pathways. Defective potassium channels are contained arrhythmia (long QT syndrome); epilopsy: and Bartter's syndrome. Contained arrhythmia (long QT syndrome); epilopsy: and Bartter's syndrome. Contained arrhythmia potassium channels of virtually all cells, contained that abnormal potassium channels of virtually all cells, contained the potassium channels of also implicated in certain renal, cardiovascular and central nervous system (CNS) contained the box sequences encoding them. They may be used for the contained potassium channels of the K+Hnov protein and in studying the biochemical pathways associated with it. They may also be used for the contained production of K+Hnov protein in all pene therapy protocols for the treatment of diseases associated with abnormal potassium channels.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acids encoding mammalian K+Hnov po issium channel proteins, useful for the diagnosis and trearrest of episodic with myokymia, cardiac arrhythmia, epilepsy and Bartter's syn
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim

The polypuroleotide sequence of h-TREK1 can be used to diagnose a disease or susceptibility to a disease related to expression or activity of h-TREK-1 polypeptides. The methods of diagnosis may be used in the treatment of diseases including cancer, pulmonary, cardiovascular, and inflammatory diseases, pain, psychiatric disorders including depression and schizophrenia, neurodegenerative diseases including Alzheimer's,

                                The present sequence is human TREK1 (h-TREY). h-TREK1 is a member of the 2P domain potassium channel family of prote. hich play a part in the control of resting membrane potential. Modular in of these channels will therefore affect neuronal excitability, thereby leading to a modulation of neurotransmitter release and activity of neuronal networks. Such modulation therefore may be useful for the treatment of certain neurological conditions such as epilepsy, significant disorders, cognitive dysfunction, attention deficit disorders, addiction, anxiety/phobia, Parkinson's and Huntington's Jurea, cerebral palsy, anxiety/phobia, Parkinson's and Huntington's Jurea, cerebral palsy,

The present sequence represents a mechanically sensitive potassium channel protein designated TREK-1. The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with

The h-TRAAK polypeptides and polynucleotides may be used in diagnostic assays for conditions related to h-TRAAK polypeptides. The h-TRAAK polypeptides and antagonists of h-TRAAK polypeptides. The h-TRAAK polypeptides and polynucleotides may also be useful for treatment and prevention (e.g. as vaccines) of certain diseases, such as pain, psychiatric disorders including depression and schizophrenia, neurodegenerative disease including Alzheimer's, stroke and head trauma and neurological disorders including migraine and epilepsy. The present sequence is human h-TRAAK protein #1.

The protein is activated by polyunsaturated fatty acids, particularly arachidonic acid, and by riluzole. The protein is used to screen for specific modulators which are useful for treating or preventing diseases of the heart and nervous systems in humans and animals, e.g. epilepsy, cardiovascular disease (arrhythmia), neurodegeneration (particularly where associated with ischemia or anoxia), abnormalities of hormone secretion and muscular disease. The protein itself may be used to treat these diseases. Antibodies specific for the protein are used to detect it in tissues,
